Amendments to the Specification

Please replace paragraph [0052] with the following amended paragraph:

[0052] In a preferred embodiment, the individual cells in the image are delimited by generating the image to have each cell isolated. A rippled opaque line 45 (FIG. 7) is drawn on the top and bottom of each slit 21 along a horizontal row of cells, thus separating and/or isolating the rows of cells from each other. This feature eliminates the vertical distortions perceived when the viewer observes the 3D image past a certain vertical angle. As shown in the figure, cells in adjacent rows lie partially adjacent to each other in the vertical direction.
